

Step 1: Identify Object Types

This first step focuses on identifying relevant object types, i.e., general categories of entities that are relevant in your work, which can be people and things.

You will generate a customized list of object types based on your profession. Please review them and reflect on whether they are likely to appear in your work. You may add additional types or delete ones that are irrelevant in your work context.

 Generate Object Types

 Add a new object type:

Add Object Type

Object types (editable):

students × courses × assignments × exams × departments ×

publications × classes × colleagues × research_projects × committees ×

lectures × grades × administrators × conferences ×

 Confirm GPT-Generated Object Types
